

HCI HW 1 Notes

- Subject T is a person who uses Droid
- Holds phone in hand
- Hits buttons but they don't work
- To make a new playlist, go to song & add
- Give it a name, save
- Shuffle exists
- Menu exists at bottom of screen
- Some songs have album covers, some don't
- Audio effects settings
- As playing, other actions can go on
- Music plays out of speaker
- Cannot change song into from phone interface
- No recommendations for new music
- No like - doesn't categorize well, cannot rename
- Sometimes uses iPod / prefers iPod due to instability
- Genres listed
- Play all feature / all songs or within an album
- Cannot play on with an artist
- Doesn't show how many songs you have
- Drop an MP3 into the phone or use an app, MP3 Music Download
- Scroll feature - tap & then tap side bar to scroll through list
- Doesn't have letters to scroll feature
- Bottom has currently playing song while browsing
- Side buttons control volume
- No way to get rid of the bottom bar
- Categorizing doesn't work well sometimes
- When going back, it starts at the beginning of the list
